Wood Wyant Product Selection Guide

Above the Floor Cleaners

Wood Wyant Product Selection Guide

GETTING STARTED

Things to know BEFORE starting to clean:

What is the size of the area to be cleaned?

What is the frequency of cleaning?

What type of soil are you trying to remove?

Common soils (polar) or oils and grease (non-polar)?

What is the soil load on the various surfaces?

Light, Medium, Heavy

What is the type of surface?

There are many variables for the selection of cleaners. This guide is formatted to provide guidance for these and many more questions. The frequency of cleaning a surface will determine your need for a grab-n-go product or one that requires mixing with water. Our line-up includes many options for both ready-to-use and concentrated versions and this becomes one of the first deciding criteria. Once the format has been chosen, the soil and surface type will help you narrow down your choice. Within each category, this guide lists the products from easier-to-remove soils to more difficult ones.
